

N NIVETHA

"Being women, looking in to every field of life, as it may be managing of corporations or managing of household things or sports world, women's success stories are sky high. Most of the women's are born with entrepreneurial skills and are known for it."

CLUSTER: 2014-2018

DISCIPLINE: Electronics and Communication

In recent times I have been invited as a Jury for our college symposium. That day made me to realize how far I have achieved in my career.

After accomplishing my board exams, I set my foot into this college to pursue my undergraduate in the sector of Electronics and Communication in keeping mind about my family and financial situation. During my journey in the year of one, even though my expectation was very less with the college since the environment was rural, approaches made by the management driven me to change my mind set. They strongly made me to believe that it doesn't matter "where" we study, but "how" we study.

WING TRUCK

After a year, I have been associated with the department. Electronics department faculties played a pretty much role not only in enhancing the career growth of the students but also their professional growth.

In addition to the above, the management/department allowed us to proceed in various non-collegiate tasks in view to enhance/expertise in our technical proficiency. For example, to go in for symposium, paper presentation, project development campaigns, internship, etc., in both inside and outside of the institution which helped to learn team work where it stands as a base for professional growth. It's not concerned about winning but taking part in each and every activities stands as a stepping stone.

ANCILLARY ENTERPRISE

I have been deployed as a class representative which gave me enough experience in developing my leadership skills. Students have been offered with library facilities at free of cost where we can find thousands of book available in segregation with associated departments. Also biweekly, two hours allocated for R&D and sports activities. Honesty exercise has been unlocked in concern with upfront ventures of the students. So many students entrusted the things, money, purse, etc., which was missed by the members.

From the launching of third year, students were engaged in placement activities. Faculties are hired from external to give learning on Aptitude, Mock interviews, Group discussions, etc. in view of job recruitment. All internal faculties are also very co-operative with students and they will take care about individuals' improvement by regular mentoring. These placement undertakings really helped me in erecting the strong basic foundation not only in haunting the interviews but also for constructing government examinations.

I have completed my schoolings in one of the best reputed institution in Viluppuram. My friends took the colleges in Chennai for their UG programs. They always make fun of me for choosing Mailam Engineering College. I doesn't have my ear on that because I strongly believed that as I mentioned earlier "It doesn't matter where we study. It's all about how we learn and how we utilize all the resources from the institution/management. Also I have concluded in my believing. In result to that, now I'm in a very good position when compared to all my friends.

PROFESSIONAL PAVEMENT

HCL Technologies Ltd.,

After concluding my UG, I have joined as a "Delivery Compliance Analyst" in HCL Technologies, Chennai. Being a first organization in my career, learnt and enhanced my white collar thickening.

There I have been aligned with two engagements, where I have to perform enhance compliance assessment (Information security audit). Finally, there I depleted my 1.8 years from July 2018 to March 2020.

Deloitte Touche Tohmatsu Services, Inc.

In order to enhance more, I annexed with next organization "Deloitte Touche Tohmatsu Services, Inc." from March 2020 onwards. It's the number one accounting firm in the world and is one of the big four organizations. Here now I am holding the position of "Senior Analyst" at Cybersecurity compartment in Risk Advisory assistances.

HAT TIP

I am extremely thankful to the management and faculties for their endless attempts to ensure a dazzling and fruitful time ahead for us.
